

DOT Physical: The FMCSA requires all CDL drivers to have a DOT physical performed by a certified medical examiner on the national registry. During the DOT exam, the following is included for testing: Vision, hearing, urinalysis, and a physical exam. Upon medical approval, the driver will receive their medical certificate onsite. We submit the necessary documentation electronically to the FMCSA.

DOT urine drug screen: We offer urine drug testing that is compliant with DOT requirements. Our fully equipped medical bus is designed to accommodate urine testing. Specimens are shipped overnight to certified labs for analysis. Results are provided to employers within a few days.

Non-DOT urine drug screen: Public and private sector employers are welcome to utilize our services for non DOT drug screening. Pre-employment, new hires, and random drug screening can be performed onsite at your place of business. Specimens are shipped overnight to certified labs for analysis. Results are provided to employers within a few days.

Saliva Drug test: This is a non-DOT drug test. The saliva drug test utilizes a mouth swab instead of traditional urine testing. This test provides rapid results and is ideal for pre-employment, new hires, and random drug screening. Results take place in a matter of minutes instead of a few days. This test is preferred by both employees and employers due to convenience and method of testing.

Alcohol testing (BAT Certified): We offer alcohol screening and confirmation testing using a Mark V breathalyzer. This is a DOT/NHTSA certified device. We employ certified Breath Alcohol Technicians. Results take place onsite at time of testing.
